Future Plans

1. Cloud-Based and Hybrid Library Models

- **Digital Archives and Resources:** Libraries will likely continue to expand their digital collections, offering access to e-books, academic journals, video lectures, and other digital

resources through cloud platforms. This model would support remote access for students and faculty.

- **Hybrid Services:** A blend of physical and digital resources would allow users to access books, articles, and media both online and offline. Digital systems could interface seamlessly with physical materials, enabling users to reserve, check out, or even digitize resources instantly.

2. Access to Global Knowledge

- **Global Connectivity:** With cloud-based systems, students could have access to a broader range of academic resources from libraries around the world, supporting international collaboration and research. Online journals, databases, and inter-library lending systems could break down geographic barriers to learning.

3. Community Engagement and Outreach

- **Collaborative Events and Workshops**

Libraries could host virtual or hybrid workshops on digital literacy, research skills, and other topics that help students and faculty make the most of library resources.

- **Public Programs and Lectures**

Libraries may evolve into venues for lectures, webinars, and other community engagement activities, leveraging digital technologies to broaden their reach to the public.
